

Engineering\ Manufacturing

Parallel Tool & Die's professionals can handle all your engineering requirements. The first step is meeting and listening to the customer to define their needs and concerns. Using our decades of experience in tooling and manufacturing to present the customer with a cost effective solution. Solid model and detail drawings are provided for approval before machining.

Turnkey packages for molds, dies, fixturing and machining solution adapted to new or existing machine tools. Special machine design, build and integration. Part runoff at our facility.
